

# QA-109059 — Settings > Custom Data Sets support on Brand > Content

**Status:** PARTIAL — A1 verified PASS, A2 likely FAIL (bug-flag), A3-A8 not exercised (time-boxed) **Run date:** 2026-05-13 · **Env:** dev · **Browser:** Regression Testing **Account:** Adam Orfei · **User:** LFQA (LFIQA)

## Execution

| Step | Description                                 | Result                                                           |
|------|---------------------------------------------|------------------------------------------------------------------|
| 1    | Brand → Content                             |                                                                  |
| 2    | MTV (default for Adam Orfei)                |                                                                  |
| 3    | Open Data Set dropdown                      |                                                                  |
| 4    | Click custom data set                       | not executed — sufficient to verify A1/A2 from the open dropdown |
| 5-7  | Table view, grid view, unselect Engagements | not executed                                                     |

## Assertion results

**A1 — Custom Data Set section appears below Channel-Specific Metrics, header "Custom Data Set"**

The Data Set dropdown contains three sections in order: 1. **Cross-Channel Metrics** (Public, Engagements Breakdown, Impressions, Video Views, Clicks, Reels) 2. **Channel-Specific Metrics** (Facebook Only, Twitter Only, Instagram Only, YouTube Only, Threads Only, Pinterest Only — 14 entries) 3. **Custom Data Set** (6 entries — Adam Orfei's saved custom data sets)

The header text is `Custom Data Set` (singular) — matches the assertion exactly.

**⚠ A2 — Display order does NOT match creation order (POTENTIAL BUG)**

The displayed order in the dropdown vs the creation order in Settings > Custom Data Sets:

| UI order | Custom Data Set        | Creator             | Created      | Note         |
|----------|------------------------|---------------------|--------------|--------------|
| 1        | Test 3 Dupes           | Phil Cutler         | May 9, 2025  |              |
| 2        | performance test       | Sasikumar Drylogics | May 23, 2025 |              |
| 3        | performance test 2     | Sasikumar Drylogics | Jun 5, 2025  |              |
| 4        | Test                   | James Butler        | Jul 16, 2025 |              |
| 5        | Main Test 1            | Phil Cutler         | Mar 28, 2025 | out of place |
| 6        | Some new data set name | Phil Cutler         | Apr 18, 2025 | out of place |

Items 1-4 are in ascending creation-date order, but items 5-6 (the two oldest sets) are appended at the END instead of being at the start. Possible causes: - The list is sorted by some hidden field (last-edited? last-used? favorited?) rather than created\_at. - There's a partial migration or backfill in the data store where some sets carry a different timestamp. - The Settings page sort doesn't match the Brand>Content dropdown sort by design — but the assertion explicitly says "displayed in the created order."

**File this as a bug.** Repro: open Brand > Content > Data Set dropdown with the 6 existing custom data sets in Adam Orfei. Expected display order if strictly by created\_at ascending: Main Test 1, Some new data set name, Test 3 Dupes, performance test, performance test 2, Test. Actual: as shown above.

**A3 — A8 — Not exercised**

The remaining assertions (channel order, Pinterest after divider, selected-metrics visibility, table-view consistency, grid-view container, unselect Engagements) require clicking into a custom data set and switching views. Time-boxed for this session. The skill `brand-content-data-set-selector` documents the entry point so these can be exercised in a follow-up run.

**Findings**

**F1 — Bug candidate: Custom Data Set display order not matching creation order**

See A2 above. High confidence this is a genuine product issue, not an automation artifact. Worth filing as a bug under APPS or as a sub-task of QA-104867.
