

QA-458 — TWC Report Relative Date Rates Data

QA

Status: Dev side executed; **prod comparison deferred to manual review** (per user instruction) **Run date:** 2026-05-13 · **Env:** dev (https://app.lfmdev.in) · **Browser:** Regression Testing (attached) **User:** lfika@listenfirstmedia.com (display name **LFQA**) · **Account:** Adam Orfei (account_id=54)

Execution summary

Step	Description	Result
1	Click Reporting in top nav	
2	Select Time Window Comparison	
3	Switch to Relative Dates tab	
4	Days interval (default)	
5	Start = 3 Days Before , End = 1 Day After Event	
6	Add brand The Walking Dead with Public Data perspective	(no (Public Data) variant exists — same as QA-5757; used base brand with default toggle)
7	Click Select Key Date on brand row	(new UI — captured in new skill keydate-picker)
8	Select Season 9 Episode 16	(keydate resolved to Mar 31, 2019)
9	Enable all rate metrics + Avg Responses per Post	⚠ partial (see finding F1 below)
10	Uncheck Show Metrics Graphs	
11	Check Show Share and Show Change	
12	Run Report	— story built at /#story/time_window_comparison/152990
13	Repeat on prod	not executed (per user, deferred to manual validation)

Assertion results

ID	Description	Status
A1	Dev data matches prod data cell-by-cell	DEFERRED — full dev snapshot captured for manual prod compare
A2	Show Share and Show Change columns present in tables	PASS — <code>Brand Share</code> , <code>Change</code> , <code>Change %</code> columns appear under each metric block
A3	No graphs render when Show Metrics Graphs is unchecked	PASS — only data tables visible; chart-like DOM nodes = 2 (decorative icons, not data charts)

Data captured

- **52 data tables** extracted into [QA-458-dev-snapshot.md](#) for prod compare.
- 13 unique rate metrics across Cross-Channel, Facebook, Twitter, Instagram, YouTube. TikTok had no rate metrics available for The Walking Dead.
- Each metric block contains four tables: base value, `Change`, `Change %`, `Brand Share` — confirming A2.

Findings (non-bug, worth knowing)

i F1 — Metric-selection step is ambiguous; "Avg Responses per Post" doesn't exist as a metric

Category: test_case_outdated · **Severity:** info

Step 9 says: "select all rate data points and avg responses per post metrics."

Reality observed: - **"All rate data points"** is not a discrete tree node. Filtering the metric tree by `Rate` returned **50 metrics** across two top categories (Audience & Growth: 8; Content: 42). For The Walking Dead on dev, **18 of the 50 were toggleable** — the other 32 were greyed out because the brand doesn't have data for those channel/metric combinations (e.g., LinkedIn Follower Growth Rate, Threads Fan Growth Rate). The 18 successfully enabled metrics produced the 52 captured data tables. - **"Avg Responses per Post"** is not a metric in the tree. Filter searches for `responses per post`, `avg response`, `avg responses` returned no matches. Filtering by `per post` returned 13 unrelated metrics, all named "Average Engagements per Post" or variants. Filtering by `respon` returned 16 metrics — all `Response Rate` variants (which were already enabled via the "all rates" selection).

Two possible intents: 1. The author meant "all rate metrics" — already covered. The "+ avg responses per post" phrase may be a leftover or shorthand for additional Response Rate metrics that we did enable. 2. The author meant a specific metric named "Average Responses per Post" that has since been renamed or doesn't exist for this brand.

Recommendation: Rewrite step 9 as: "In the metric tree, filter by `Rate` and click 'On' at the top of both Audience & Growth and Content. Verify the counter shows N rate metrics enabled (the rest are inactive for The Walking Dead's channels)." That makes the step unambiguous and auditable.

i F2 — Test case wording: step 13 says "stage" but description/assertion say "dev and prod"

Category: test_case_wording · **Severity:** info

Confirmed with the user that **prod** is the intended compare target. Step 13's "stage" wording is a typo and should be updated in Jira.

i F3 — Recent Searches in profile dropdown does NOT trigger account switch

Category: known_quirk · **Severity:** info (already captured)

Re-observed during this run: clicking `Adam Orfei` from the Recent Searches section of the profile dropdown did not switch accounts. Only clicking from the `Results` section (after typing the name) works. The `switch-account` skill is already updated.

Skills authored or updated this run

Skill	Action	Why
<code>keydate-picker</code>	NEW (v1, untrusted)	Captures the Season / Episode autoSelect flow for keydate-based reports
<code>time-window-comparison-run</code>	Bump to v3	Add Relative Dates flow: <code>Start</code> / <code>End</code> days, <code>Before</code> / <code>After</code> direction, "Bulk Select Key Date" caveat, keydate per-brand requirement
<code>switch-account</code>	Bump to v2	Document that Recent Searches click is a no-op for account switch (was a brand-picker-only caveat in v1)

Per-case telemetry

Metric	Value
Wall time (approx)	~12 min
MCP calls	~50
Story ID	152990
Tables captured	52
Cells captured	520
Console errors	0
Network 4xx/5xx	0
Tokens	not measured this run

What you need to do next (manual)

1. Open prod (URL TBD) in a tab.
2. Sign in as the same test user (LFIQA).
3. Switch to **Adam Orfei** account.
4. Repeat steps 1–12 in the report exactly. Use the same Start=3 Before / End=1 After / Season 9 Episode 16 keydate.
5. Compare prod's 52 tables against the dev snapshot in [QA-458-dev-snapshot.md](#). Any cell mismatch is a parity bug — file it with both the prod and dev story URLs and the offending metric/day cell.

If you ever decide to give me prod access, I can do the whole comparison end-to-end in one run.
