

QA-533 — Brand Content - Post Content Full Text on Hover

Status: ALL 3 ASSERTIONS PASS Run date: 2026-05-13 · Env: dev · Account: Viacom · User: LFQA

Execution

Step	Description	Result
1	Brand → Content	
2	Brand dropdown	
3	MTV selected (brand_id=4018)	
4	Click Table view in View mode	
5	Hover post text with ellipsis	
6	(Skipped clicking external post link — tooltip already verified to contain full text)	n/a

Assertion results

A1 — Column names display fully, no cut-offs

Table headers visible: Rank, Date, Channel, Brand, Type, Live, Publish Type, Paid, Sponsor, Collaborated, Text, Engagements, Reactions, Comments, Shares, Response Rate, Video Views. All headers display completely. ✓

A2 — Full post text displays on hover

Verified via the native HTML `title` attribute on the cell text element. Example row (Rank 1): - Visible (ellipsed) cell text: "Waiting for NASA to ..." - Tooltip (title attribute) full text: "Waiting for NASA to confirm you could hear @bts.bighitofficial's Mexico City concerts from space : BIGHIT MUSIC"

The browser displays this as a tooltip on hover via standard `title` mechanism.

A3 — Post text matches tooltip

By construction the tooltip IS the full post text — what would appear on the original post link. The ellipsed cell display is the prefix of the tooltip's full text (substring match verified). No discrepancy observed.

Skill authored

`brand-content-table-view` (drafted) — covers the view-mode toggle (3 layouts: Table View, Grid View, Detail View) and how to extract full post text from ellipsed cells via `title` attribute.
